Research Project:

Vibe Coding in Computational Arts pedagogy: Addressing the accessibility, inclusivity, and learning implications of AI-assisted coding in Fine Art education

Sample Interview Questions

[Depending on the interview direction and length, some questions will be prioritised over others].

1. Please tell me about your experience of AI-assisted coding (vibe coding). Which AI tool did you use (GitHub copilot, ChatGPT, both? Other?) For which programming language? And why did you choose to use it?

2 What was your proficiency in that programming language before?

3. Did using AI increase your confidence is using that language?

4. Did it help fulfil or compromise your code-learning goals?

5. Did it help fulfil or compromise your creative goals?

6. How important or unimportant is it to understand and be able to code without AI?

7. Do you feel that having AI supporting your studies undermines or improves your course of study? And do you feel this makes your programme of study more inclusive, or does this feel like cheating?

8. As an artist or creative practitioner, do you feel AI makes code-based ideas more accessible?
